Lab Questions

1. Design a web site using Django, which is a website directory – A site containing links to other websites. A web page has different categories.
• A category table has a name, number of visits, and number of likes.
• A page table refers to a category, has a title, URL, and many views.
Design a form that populates the above database and displays it.

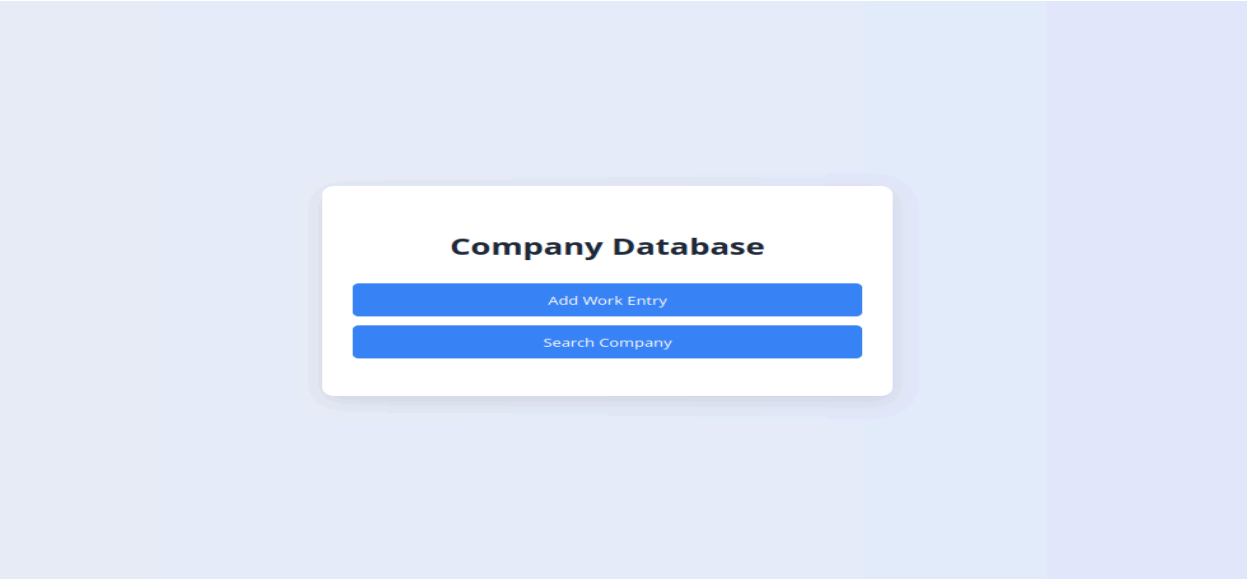
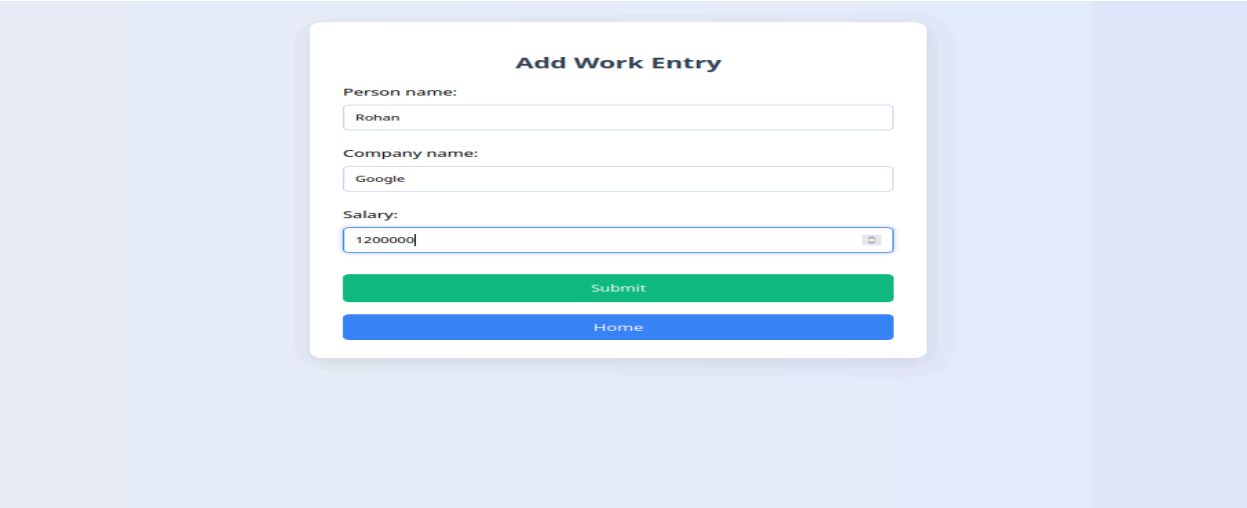
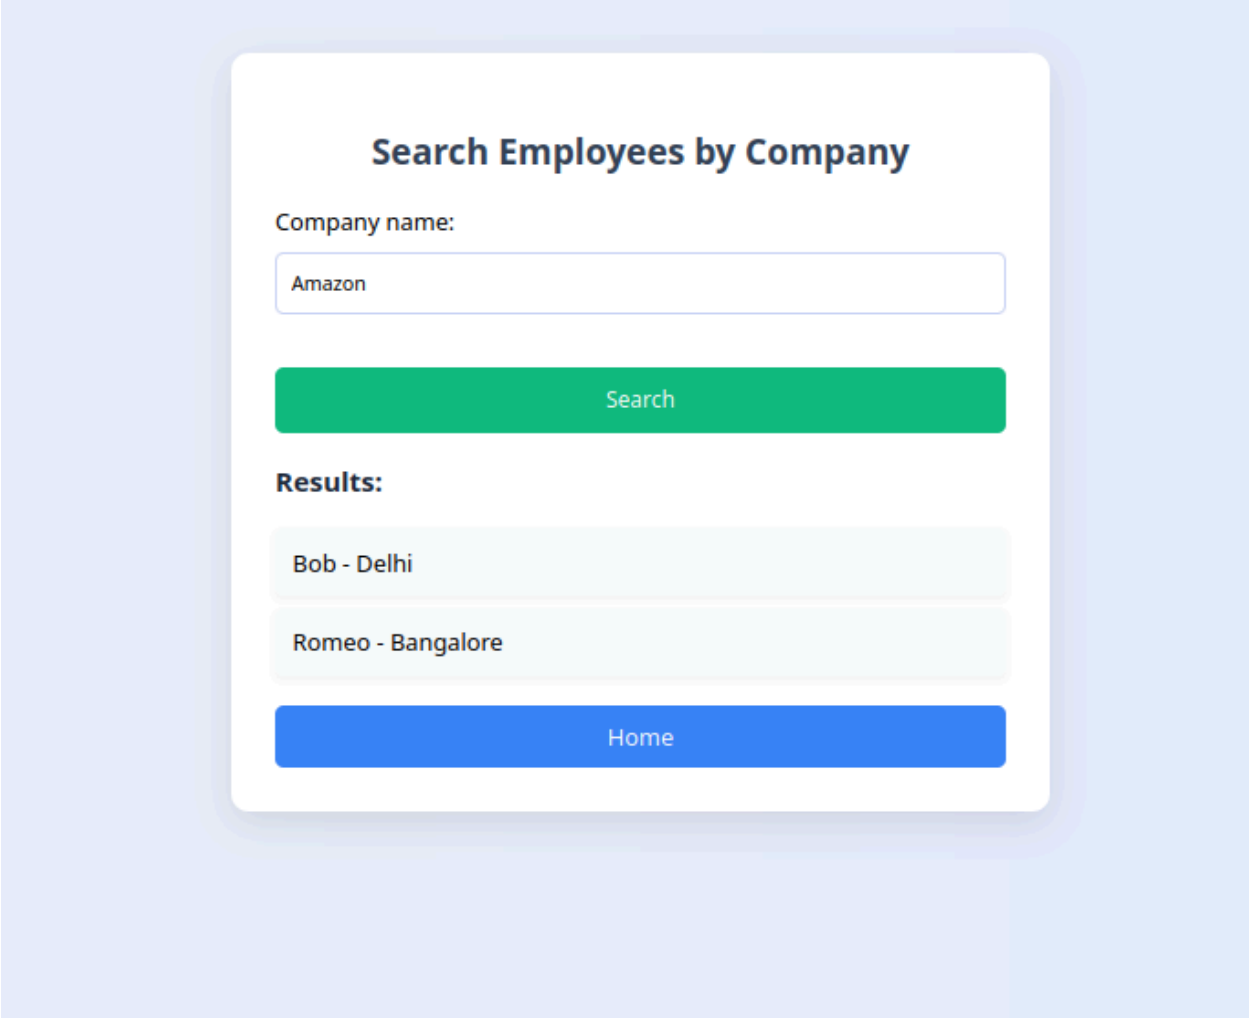
2. Consider the following tables:
WORKS(person-name,Company-name,Salary)
LIVES(Person_name, Street, City)
Assume Table data suitably. Design a Django webpage and include an option to insert data into WORKS table by accepting data from the user using TextBoxes. Also, include an option to retrieve the names of people who work for a particular company along with the cities they live in (particular company name must be accepted from the user).







Additional Questions

1. Assume a table “Institutes” with institute_id, name, and no_of_courses are the fields. Create a web page that retrieves all the data from “Institutes” table displays only Institute names in the list box.
